

Pola Bilangan dan Melompat (Skip Counting) Lanjutan - Y

Created: 6/20/2026

Student

Student: Yuki

Topic: Pola Bilangan dan Melompat (Skip Counting) Lanjutan

Status: completed

Lesson Plan

Learning Objectives

- Complete skip-counting patterns using intervals of 2, 3, 4, 5, and 10 for numbers up to 1000.
- Identify the specific rule or constant difference in a given numerical sequence.
- Solve challenging number pattern problems involving both increasing and decreasing sequences.
- Construct original number patterns based on a provided starting value and jump rule.

Lesson Information

Lesson Sections

1. Spiral Review Warm-up (10 minutes)

Teacher Script:

Hi Yuki! Welcome back to our math lab! Today, we are going to be 'Number Detectives.' But first, let's warm up our detective brains by checking our gear. I'm going to put some numbers on the screen. For our first check: Look at the number 458. Can you tell me how many hundreds, tens, and ones are in there? Great! Now, look at 902. What is the value of the 9? Perfect. Now, let's look at some small numbers. If I have 15 and I take away 7, what is left? And finally, if I have 12 and I add 8, what do I get? You are sharp today!

Activities:

- *Place Value Challenge: Identify H-T-O in 458 and 902.*
- *Quick Fire 1-20: Mental math addition/subtraction within 20.*

2. Introduction & Real-World Connection (5 minutes)

Teacher Script:

Yuki, did you know that detectives use patterns to solve mysteries? Imagine you are walking up a giant staircase in a castle that goes up to 1000 steps! If your legs are long, you might skip a step and go 2, 4, 6... If you are a giant, you might skip 10! Today, we will learn how to predict the next step no matter how big the jump is. Are you ready to find the hidden rules?

Activities:

- *Visualizing a giant staircase with missing numbers.*
- *Discussing why 'skipping' is faster than 'counting by 1'.*

3. Problem Introduction (10 minutes)

Teacher Script:

Look at this sequence on the whiteboard: 200, 205, 210, _____. Something is happening here. Is the number getting bigger or smaller? Right, bigger! By how much? Let's count the 'jump'. From 200 to 205 is a jump of 5. From 205 to 210 is another jump of 5. So the rule is '+5'. What comes after 210? Yes, 215! Now, let's try a tricky one: 500, 490, 480... Oh no, the numbers are shrinking! What is the jump rule here?

Activities:

- *Identify 'Ascending' vs 'Descending' patterns.*
- *Calculate the 'Jump Rule' using subtraction of consecutive numbers.*

4. Guided Practice (15 minutes)

Teacher Script:

Let's work together on the 'Mystery Map.' I will give you a starting number and a jump rule. If we start at 120 and the rule is '+3', let's write the next four numbers together in the chatbox. Good! Now, let's try a jump of 4. Start at 400. 400, 404, 408... what's next? Add 4 more! You're doing great. Let's try one from a real Olympiad: If I start at 900 and skip count backward by 5, what are the first three numbers?

Activities:

- *Interactive Skip Counting (+3, +4, -5).*
- *Chatbox Race: Teacher types the rule, Yuki types the next 3 numbers.*

5. Independent Practice (15 minutes)

Teacher Script:

Now it's your turn, Detective Yuki! I'm going to put 5 'Locked Boxes' on the screen. Each has a pattern. You need to find the rule and fill in the missing numbers to unlock them. Some go up, some go down. I'll be right here if you need a hint, but I bet you can solve them all!

Activities:

- *Box 1: 102, 104, 106, ___, ___ (Jump 2)*
- *Box 2: 330, 333, 336, ___, ___ (Jump 3)*

- Box 3: 550, 560, 570, __, __ (Jump 10)
- Box 4: 900, 895, 890, __, __ (Jump -5)
- Box 5: Challenge! 12, 16, 20, __, __ (Jump 4)

6. Consolidation & Reflection (5 minutes)

Teacher Script:

You did it! You solved the mystery of the skipping numbers. Today we learned that patterns always follow a secret rule. Before we go, what was your favorite jump today? The +10 or the +3? Awesome. Remember to log in to our portal at <https://learn.algonova.id/login> to see your rewards and do your detective homework. See you next time!

Activities:

- *Recap of rules discovered.*
- *Reflecting on 'Hardest vs Easiest' jumps.*

Homework

Medium Questions:

1. Find the next three numbers: 212, 214, 216, __, __, __.
2. Complete the pattern: 450, 455, 460, __, __, __.
3. What is the missing number? 10, 20, 30, __, 50, 60.
4. Identify the rule: 103, 106, 109, 112. (Rule: +__)

Hard Questions:

1. Olympiad Challenge: A pattern starts at 980 and jumps BACKWARD by 10. What is the 5th number in the sequence?
2. Fill in the blanks: 120, 124, __, 132, __, 140.
3. Identify the rule and fill the blanks: 700, 697, 694, __, __.
4. Detective Work: I am a pattern. My rule is +4. My third number is 20. What was my first number?
5. Continue the pattern: 88, 91, 94, __, __, __.
6. Find the error: In the pattern 5, 10, 15, 21, 25, one number is wrong. Which one is it and what should it be?

Answer Key:

1. 218, 220, 222 (Rule +2)
2. 465, 470, 475 (Rule +5)
3. 40 (Rule +10)
4. +3
5. 940 (980, 970, 960, 950, 940)

6. 128, 136 (Rule +4)
 7. 691, 688 (Rule -3)
 8. 12 (12, 16, 20)
 9. 97, 100, 103 (Rule +3)
 10. 21 is wrong; it should be 20 (Rule +5)
- REVIEW: Place Value - 400, 50, 8
- REVIEW: Place Value - 700
- REVIEW: Place Value - 1
- REVIEW: Place Value - 631
- REVIEW: Numbers 1-20 - 15
- REVIEW: Numbers 1-20 - 8
- REVIEW: Numbers 1-20 - 13
- REVIEW: Numbers 1-20 - 12

Parent Reminder

Today's Math Mission: Number Patterns!

Yuki did a fantastic job as a 'Number Detective' today! We leveled up from basic counting to advanced skip counting (2s, 3s, 4s, 5s, and 10s) all the way up to 1000. We even practiced some tricky Olympiad-style backward patterns! Please ensure Yuki logs in to <https://learn.algonova.id/login> to complete the mission homework.
