

# Bilangan Ganjil, Genap, dan Sifatnya - Yuki

Created: 27/06/2026

---

## Student

Student: Yuki

Topic: Bilangan Ganjil, Genap, dan Sifatnya

Status: completed

## Lesson Plan

### Learning Objectives

- Classify whole numbers up to 1000 as either odd or even based on the ones digit.
- Predict the outcome of adding two numbers (e.g., odd + even) using parity rules.
- Solve logical word problems involving pairing and sharing to demonstrate the concept of remainder.

### Lesson Information

### Lesson Sections

#### 1. Spiral Review Warm-up (10 minutes)

Teacher Script:

Hi Yuki! Welcome back! Before we start our animal party, let's wake up our math brains. Look at my screen. I have four quick challenges for you! First, look at the number 452. Can you tell me which number is in the Hundreds, Tens, and Ones place? Great! Now, look at 709—how many tens are in there? Moving to our small numbers: if we have 15, what comes next if we count by 1? And finally, if I have 12 stickers and I give 4 to a friend, how many do I have left? Type your answers in the chat!

Activities:

- *Place Value Identification (452, 709)*
- *Number Sequencing (15-20)*
- *Simple Subtraction (12-4)*

## 2. Introduction & Real-World Connection (5 minutes)

Teacher Script:

Yuki, imagine we are inviting 6 friendly lions to a dance party. To dance, every lion needs a partner. If all 6 lions have a partner, they are 'Even'. But what if a 7th lion arrives? He has no partner! He is the 'Odd' one out. Today, we are going to learn how to tell if any group of animals—up to 1,000—will have a partner or a 'lonely' one left over!

Activities:

- *Visualizing 'Partners' vs 'Lonely' ones with lion icons*

## 3. Review of Prior Knowledge (5 minutes)

Teacher Script:

Remember our 'Ones' place? In the number 128, 8 is the king of the ones! To tell if a huge number is even or odd, we ONLY need to look at that last digit. If the last digit is 0, 2, 4, 6, or 8, it's Even. If it's 1, 3, 5, 7, or 9, it's Odd. Can you point to the 'Ones' place in 345?

Activities:

- *Highlighting the ones digit in three-digit numbers*

## 4. Problem Introduction (10 minutes)

Teacher Script:

Now, let's try a mystery. If an Even number of birds (2) meets an Odd number of birds (1), how many are there total?  $2 + 1 = 3$ . Is 3 even or odd? It's odd! We are going to discover the 'Secret Rules' of adding these numbers together. Let's draw them out on the board.

Activities:

- *Pairing circles to visualize sums*
- *Introducing the rule:  $\text{Odd} + \text{Odd} = \text{Even}$*

## 5. Guided Practice (15 minutes)

Teacher Script:

Okay Yuki, your turn! I'll put a number on the screen, and you drag it to the 'Even Cave' or the 'Odd Forest'. Here is 47. Does 7 have a partner? No! So where does it go? Now look at 682. Don't let the big number scare you! Just look at the 2. Is 2 even or odd? Let's drag it together!

Activities:

- *Drag-and-drop sorting game*
- *Solving: Can 47 students be paired up for a game? Why or why not?*

## 6. Independent Practice (15 minutes)

Teacher Script:

You are a pro! Now, I'm going to give you a 'Secret Code'. I will type 5 numbers in the chat. You type 'E' for Even and 'O' for Odd. Then, I want you to solve this: An Even number plus an Even number—will the answer be Even or Odd? Use your drawing tool to prove it!

Activities:

- *Rapid fire Chat identification*
- *Self-correction exercise for sums*

## 7. Consolidation & Reflection (5 minutes)

Teacher Script:

What a great party! We learned that Even numbers always have a friend, and Odd numbers have one left over. To check any big number, we just look at the last digit. You did amazing, Yuki! Don't forget to join <https://learn.algonova.id/login> to see your stickers and practice! See you next time!

Activities:

- *Recap of the 'Big Rule'*
- *Awarding virtual party trophy*

## Homework

### Medium Questions:

1. Is the number 56 even or odd?
2. Identify the ones digit in 883 and state if the number is even or odd.
3. Which of these numbers is Even: 21, 44, 75, or 99?
4. If you have 10 apples, can you give every apple a partner? Is 10 even or odd?

### Hard Questions:

1. Without adding, predict if  $12 + 15$  will be Even or Odd. Explain why.
2. If you add two Odd numbers together, will the result always be Even? Prove it with  $3 + 5$ .
3. A class has 47 students. The teacher wants to split them into pairs. Will there be one student left without a partner?
4. Find the largest even number you can make using the digits 4, 7, and 9.
5. If you add an Even number and an Odd number, is the total Even or Odd?
6. Is the sum of  $100 + 200 + 1$  even or odd? Look at the last digit!

### Answer Key:

1. Even (ends in 6)

2. Digit is 3; Odd
  3. 44 (ends in 4)
  4. Yes; Even
  5. Odd (Even + Odd = Odd)
  6. Yes, Even (The two 'extras' form a pair)
  7. Yes (47 is Odd)
  8. 974 (Must end in 4 to be even)
  9. Odd
  10. Odd (ends in 1)
- REVIEW: Place Value - 4 Hundreds, 5 Tens, 2 Ones  
REVIEW: Place Value - 500 (5 is in the hundreds place)  
REVIEW: Place Value - 0 (Zero tens)  
REVIEW: Place Value - 1000  
REVIEW: 1-20 - 18  
REVIEW: 1-20 - 14  
REVIEW: 1-20 - 20 (17+3)  
REVIEW: 1-20 - 1

## Parent Reminder

### Today's Math Adventure: Pairs and Spares!

Hi! Today Yuki explored the world of Odd and Even numbers. We practiced sorting large numbers up to 1000 and even predicted addition results using 'parity rules'. Yuki did great with the 'Partner' concept! Please encourage Yuki to log in at <https://learn.algonova.id/login> to complete the fun follow-up challenges.
