

Penjumlahan 3-digit dengan Simpan (Regrouping ke Puluh

Created: 11/07/2026

Student

Student: Yuki

Topic: Penjumlahan 3-digit dengan Simpan (Regrouping ke Puluhan)

Status: completed

Lesson Plan

Learning Objectives

- Model 3-digit addition using virtual base-10 blocks to demonstrate regrouping from ones to tens.
- Calculate the sum of two 3-digit numbers using the standard vertical algorithm with regrouping.
- Solve real-world addition problems involving three-digit quantities of marbles or grains.
- Represent place value shifts by trading 10 ones for 1 ten during the addition process.

Lesson Information

Lesson Sections

1. Spiral Review Warm-up (10 minutes)

Teacher Script:

Hi Yuki! I am so happy to see you today. Before we start our new adventure, let's flex our brain muscles! We are going to play a quick game. Look at my screen. Can you tell me the value of these numbers? [Check 1: Place Value] What is the value of the digit 5 in 523? Good! [Check 2: Place Value] If I have 3 hundreds, 0 tens, and 7 ones, what number is that? [Check 3: Numbers 1-20] Yuki, can you quickly add $8 + 7$ for me? Excellent! [Check 4: Numbers 1-20] What is the missing number in this pattern: 12, 14, 16, __? You've got it! Your brain is totally ready.

Activities:

- *Identification of hundreds, tens, and ones in 3-digit numbers.*
- *Building numbers from place value components.*
- *Mental math addition within 20.*
- *Number pattern completion.*

2. Introduction & Real-World Connection (5 minutes)

Teacher Script:

Yuki, imagine you are a master marble collector! Today, you have two big bags of marbles. One bag has 128 marbles and the other has 115. If we put them together, how many do we have? We need a special trick called 'Regrouping' to find out. It's like magic—when we have too many ones, they transform into a ten!

Activities:

- *Discussing marble collections.*
- *Setting the scene for a 3-digit addition problem.*

3. Review of Prior Knowledge (5 minutes)

Teacher Script:

Let's look at our 'Base-10 Blocks.' Remember, 10 small ones cubes (units) are the exact same size as 1 tens rod! Let's practice dragging 10 ones together to make a rod on the screen. Try it now!

Activities:

- *Interactive drag-and-drop: matching 10 ones to 1 ten rod.*

4. Problem Introduction (10 minutes)

Teacher Script:

Now, look at $128 + 115$. We start with the ones! $8 + 5 = 13$. Uh oh, Yuki! 13 is too big for the ones place! We only have space for one digit. So, we take 10 ones, make a new Ten Rod, and carry it over to the 'Tens neighborhood.' Now we leave the 3 ones behind. This is called 'regrouping.' Let's see it happen!

Activities:

- *Teacher models the addition of $128 + 115$ visually.*
- *Demonstrating the 'carry over' (regrouping) step in the vertical algorithm.*

5. Guided Practice (15 minutes)

Teacher Script:

Your turn! Let's solve $246 + 137$ together. First, look at the ones: $6 + 7$. What's that? Correct, 13! Type '3' in the ones box and '1' above the tens. Now, let's add the tens: $1 + 4 + 3$. What do you get? Great! And finally, the hundreds: $2 + 1$. Put it all together, what's our total?

Activities:

- *Guided solving of 3 addition problems with carrying.*
- *Student uses the chatbox to submit partial sums (ones first, then tens).*

6. Independent Practice (15 minutes)

Teacher Script:

You're a pro! I am going to give you three challenges. You have to shop for bags of grain. Bag A + Bag B. Write the vertical addition on your screen and solve it. I'll be right here if you need a hint!

Activities:

- Solving $348 + 125$.
- Solving $519 + 232$.
- Solving $407 + 126$.

7. Consolidation & Reflection (5 minutes)

Teacher Script:

Yuki, you did amazing! What happens when the ones add up to 10 or more? Yes, they move to the tens! You are ready for your homework. Please remind Mom or Dad to help you log in to <https://learn.algonova.id/login> so you can finish your star missions. See you next time!

Activities:

- Summary of the 'Regrouping' rule.
- Self-reflection: 'How do you feel about adding big numbers?'

Homework

Medium Questions:

1. $154 + 237 = ?$
2. $428 + 143 = ?$
3. $615 + 126 = ?$
4. $339 + 242 = ?$

Hard Questions:

1. In a marble jar, there are 256 blue marbles and 135 red marbles. How many marbles are there in total?
2. A farmer has 547 grains of corn and 228 grains of rice. How many grains does he have altogether?
3. If you add $468 + 317$, what digit is in the tens place of the answer?
4. Solve: $709 + 185$.
5. Solve: $654 + 219$.
6. You have 385 stickers and buy 107 more. How many do you have now?

Answer Key:

$154 + 237 = 391$ (11 ones -> 1 ten and 1 one)
 $428 + 143 = 571$ (11 ones -> 1 ten and 1 one)
 $615 + 126 = 741$ (11 ones -> 1 ten and 1 one)
 $339 + 242 = 581$ (11 ones -> 1 ten and 1 one)
 $256 + 135 = 391$ (Regrouping 11 ones)
 $547 + 228 = 775$ (Regrouping 15 ones)
 $468 + 317 = 785$. Digit in tens place is 8.
 $709 + 185 = 894$ (Regrouping 14 ones)
 $654 + 219 = 873$ (Regrouping 13 ones)
 $385 + 107 = 492$ (Regrouping 12 ones)
 REVIEW: Place Value hingga 1000 - 452 (Medium) -> 4 Hundreds, 5 Tens, 2 Ones
 REVIEW: Place Value hingga 1000 - Value of 8 in 812 (Medium) -> 800
 REVIEW: Place Value hingga 1000 - Write 9 hundreds, 0 tens, 4 ones (Hard) -> 904
 REVIEW: Place Value hingga 1000 - Which is larger: 321 or 312? (Hard) -> 321
 REVIEW: Assessment & Fun with Numbers 1-20 - $9 + 6$ (Medium) -> 15
 REVIEW: Assessment & Fun with Numbers 1-20 - $18 - 5$ (Medium) -> 13
 REVIEW: Assessment & Fun with Numbers 1-20 - Two more than 17 (Hard) -> 19
 REVIEW: Assessment & Fun with Numbers 1-20 - $20 - 7$ (Hard) -> 13

Parent Reminder

Ø<ß Yuki's Math Adventure: The Power of Regrouping!

Today, Yuki learned the 'magic trick' of addition: Regrouping! We explored how 10 small ones cubes turn into a single tens rod when adding 3-digit numbers. Yuki did great with our marble and grain challenges! To keep the momentum going, please log in to <https://learn.algonova.id/login> for a few fun practice problems. Great job, Yuki!
