

Penjumlahan 3-digit dengan Simpan (Regrouping ke Ratusan)

Created: 7/18/2026

Student

Student: Yuki

Topic: Penjumlahan 3-digit dengan Simpan (Regrouping ke Ratusan)

Status: completed

Lesson Plan

Learning Objectives

- Calculate the sum of two 3-digit numbers involving regrouping from the tens place to the hundreds place.
- Model the regrouping process using virtual place value blocks on a digital whiteboard.
- Solve multi-step word problems involving 3-digit addition within a shopping context.
- Verify the accuracy of addition results using the commutative property.

Lesson Information

Lesson Sections

1. Spiral Review Warm-up (10 minutes)

Teacher Script:

Hi Yuki! Welcome back to our math lab! Before we open our Toy Store today, let's wake up our brain muscles. Look at my screen. Question 1: In the number 425, which digit is in the Hundreds place? Question 2: Can you write $700 + 30 + 9$ as one big number? Great! Now for our speed round: What is $12 + 6$? And if I have 20 stickers and give 5 away, how many are left? type your answers in the chatbox as fast as a racing car!

Activities:

- *Place Value Identification (425)*
- *Expanded Form to Standard Form (7039)*
- *Mental Math Addition (1-20)*
- *Mental Math Subtraction (1-20)*

2. Introduction & Real-World Connection (5 minutes)

Teacher Script:

Yuki, imagine you are the manager of the world's biggest Toy Store! Today, a customer wants to buy a giant Robot for 250 coins and a Space Station for 180 coins. To be a great manager, we need to know exactly how much they cost together. This is where our 'Super Regrouping' power comes in handy!

Activities:

- *Engaging storytelling session about the Toy Store.*
- *Poll: Would the total be more or less than 300?*

3. Review of Prior Knowledge (5 minutes)

Teacher Script:

Remember our place value houses? We have the Ones house, the Tens house, and the Hundreds house. If the Tens house gets too full (more than 10), what happens? That's right! They pack their bags and move to the Hundreds house next door. Let's practice moving 10 tens into 1 hundred right now on the board.

Activities:

- *Drag-and-drop 10 blue 'Tens rods' into 1 green 'Hundreds square'.*

4. Problem Introduction (10 minutes)

Teacher Script:

Let's solve $250 + 180$ together. First, we add the Ones: $0 + 0 = 0$. Easy! Next, the Tens: 5 tens + 8 tens = 13 tens! Uh oh, the Tens house is too full! Yuki, take 10 of those tens and move them to the Hundreds house. How many tens are left? Yes, 3! And we carry the 1 to the Hundreds. Now, what is $1 + 2 + 1$ in the Hundreds house?

Activities:

- *Step-by-step walkthrough of $250 + 180$.*
- *Color-coding digits (H-Red, T-Blue, O-Green).*

5. Guided Practice (15 minutes)

Teacher Script:

Now it's your turn to drive the mouse! Let's calculate the cost of a Dollhouse (362) and a Toy Train (271). Write them vertically. Start with the ones, then the tens. If you see the tens going over 10, shout 'Regroup!' and move that 1 to the hundreds column. I'm watching your screen—go for it!

Activities:

- *Solving $362 + 271$ with teacher guidance.*
- *Checking the answer by switching the numbers ($271 + 362$).*

6. Independent Practice (15 minutes)

Teacher Script:

You are a pro! Here are 3 VIP Toy orders. Try to solve them on your own. If you finish, I have a 'Super Boss' riddle for you at the bottom. Use the 'Undo' button if you make a mistake, and remember to label your H-T-O columns!

Activities:

- Solving $470 + 250$.
- Solving $192 + 324$.
- Solving a word problem: 'Yuki has 150 cars. Friend gives 160 more. Total?'

7. Consolidation & Reflection (5 minutes)

Teacher Script:

High five, Yuki! Today you learned how to move 'Tens' into the 'Hundreds' house. What was the trickiest part? You did amazing. Don't forget to show your parents your Toy Store total! Before you log off, please join <https://learn.algonova.id/login> and go to our lesson for your stars. See you next time!

Activities:

- Self-reflection: 'One thing I learned today'.
- Login reminder.

Homework

Medium Questions:

1. $150 + 160 = ?$
2. $281 + 142 = ?$
3. $473 + 235 = ?$
4. $640 + 180 = ?$

Hard Questions:

1. $392 + 427 = ?$
2. $585 + 241 = ?$
3. A baker has 250 chocolate cookies and 260 vanilla cookies. How many cookies in total?
4. Find the missing number: $170 + \underline{\quad} = 320$.
5. Solve $180 + 150$ and then check by solving $150 + 180$. Are they the same?
6. Yuki has 340 marbles. He wins 180 more, then gives 10 to a friend. How many now?

Answer Key:

Medium 1: 310 (Regroup 11 tens to 1 hundred, 1 ten)

Medium 2: 423 (Regroup 12 tens to 1 hundred, 2 tens)
Medium 3: 708 (Regroup 10 tens to 1 hundred, 0 tens)
Medium 4: 820 (Regroup 12 tens to 1 hundred, 2 tens)
Hard 1: 819
Hard 2: 826
Hard 3: 510 cookies
Hard 4: 150
Hard 5: 330 (Both are same due to commutative property)
Hard 6: 510 ($340+180=520$; $520-10=510$)
REVIEW: Place Value - $400+50+2 = 452$
REVIEW: Place Value - 876 has 8 hundreds, 7 tens, 6 ones
REVIEW: Place Value - Largest 3-digit number is 999
REVIEW: Place Value - 10 tens make 100
REVIEW: Numbers 1-20 - $15 + 4 = 19$
REVIEW: Numbers 1-20 - $20 - 7 = 13$
REVIEW: Numbers 1-20 - (Double 9) + 2 = 20
REVIEW: Numbers 1-20 - 18 minus 9 = 9

Parent Reminder

Today's Math Milestone: 3-Digit Addition!

Yuki did a fantastic job managing a 'Toy Store' today! We leveled up to 3-digit addition with regrouping (carrying over tens to hundreds). To keep the momentum going, ask Yuki to help 'add up' items over 100 at home! Please ensure Yuki logs into <https://learn.algonova.id/login> to complete the fun follow-up tasks.
